- About 93,000 new jobs are projected for Montana between 2000 and 2010—most of them wage and salary.
- This translates to about 9,300 jobs added to Montana's economy per year.
- Most job growth is projected to be in service-producing sectors, with health services and business services leading in job growth.
- The largest job growth in goods-producing industries is projected to be in the construction sector.
- These job projections will be presented in much more detail in the Research and Analysis Bureau's 4th Quarter 2002 *Montana Employment and Labor Force Trends* publication available in print and on the bureau's website in February.

NOTE: Because of uncertainty in predicting the future, these projections should be interpreted as only a general approximation of jobs overall or for a given industry. Average increases projected over 10 years do not apply to a specific year.
